

## LMS Platforms

A Learning Management System (LMS) is software that automates management of training events. An LMS allows for users' self registration on training programs, keeps records of learners' performance and delivers reports for managing the organization. An LMS is typically designed for publishers and multiple providers, and it can manage courseware developed from different sources or include capabilities of learning content management system (LCMS). At Actívica we have successfully integrated hundreds of courses developed in more than 30 proprietary and open source platforms available on the market. Visit the Expertise Grid to see the complete list.

LMS PLATFORMS OUR COURSEWARE HAS BEEN DEPLOYED ON:

**Moodle, Ilias, Docent, SUMTotal, A+, Blackboard, Docebo, Claroline, Dokeos, Learn, Plateau, Skillsoft, Ghanesa, OLAT, Vuepoint, MyLearning, SABA, Geolearning, Gen21, Pathlore, Luvit, EEDO**

## Open Source LMS

We are specialists in customizing, enhancing and implementing open source Learning Management System platforms as Moodle. Here are some advantages of this LMS:

### Cost Saving

As opposed to commercial LMS platforms (such as SABA, Plateau, SUMTotal to name a few), Moodle is an Open Source LMS which can be downloaded without restrictions by anybody from the Moodle website. No matter how many individuals in your organization use it, you will never need to pay a single license for users. In addition, as it is open source it can be easily integrated with pre-existing systems in your organization, such as CRMs, ERPs, etc.

### The Most Widespread

The enormous amount of successful Moodle deployments and user base is a clear sign of the popularity it is obtaining in the LMS world in general. Recent statistics show that Moodle has been installed in over 50.000 organizations among which we can find universities, public organizations, private companies and even Fortune 500 corporations. Moodle also has a user community of 30.000.000 and growing from around the globe, which every day share code improvements and additions with the rest of the community

### Actívica & Moodle

Actívica, an Argentine e-learning company certified in ISO 9001:2000 has consistently been implementing Moodle for its clients that do not already have an LMS solution in place at the time of consulting with us. As a leading case, we can mention the installation and deployment we did for McDonald's Latin America, which uses the platform to train it's more than 50.000 employees and stakeholders in the region.
